This invention relates to novel nucleic acids encoding human PRO secreted and transmembrane proceins. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular organisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information received from other cells and the immediate environment. The information is often transmitted by secreted polymediated by information is often transmitted by secreted polymediate environment. The information is often transmitted by secreted by dispeptides (for example mitogranic factors, survival factors, cytotoxic factors, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may he useful for measuring or treating a tumour in a mammal. In addition, they may be useful for measuring or detecting the expression of a tumour associated gene. The present invention

Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular organisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information received from other cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytocoxic factors, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse
                                                                                                                                                                                        gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gao W;

cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of onvel human membrane bound receptors and proteins, along with the CDNA sequences encoding them. The novel proteins of the invention may have eytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating a detecting the expression of a tumour associated gene. The present sequence is a CDNA sequence which encodes a human PRO protein of the

ADC58526 standard; cDNA; 1679 BP. (first entry) 18-DEC-2003 ADC58526;

Novel human secreted and transmembrane protein cDNA Seq ID375.

human; PRO; membrane bound protein; membrane bound receptor; cell proliferation; cell migration; cell differentiation; mitogenic factor; survival factor; cytocoxic factor; differentiation factor; neuropeptide; hormone; cell receptor;

This invention relates to novel nucleic acids encoding human PRO secreted and transmembrane proteins. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular corganisms. The fate of many individual cells (for example proliferation, organisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information.

Corganisms. The fate of man the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, concretes, survival factors, cytotoxic factors, differentiation factors, and receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating a tuminal for the manufacture of a medicament for diagnosing or treating a cuminal control of a funnour associated gene. Gao W;

Transmenbrane polypeptides an antibody which specifically binds to a PRO polypeptide, an antibody which specifically binds to a PRO polypeptide, an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for other proliferation or differentiation of chondrocyte cells and a method for colon, breast, prostate, rectal, kidney, cervical and liver tumous). The proliferation probes, in chromosome and some mapping, in generating antisense RNA and DNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinate techniques and in generating either transgenic animals or knock-out animals which are consistent and screening of therapeutically useful reagents. The PRO polypeptides by recombinate techniques and in generating either treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating the upreparing of therapeutically useful reagents. The PRO polypeptides or antibodies, such as tumours, for stimulating the uppart of stimulating proliferation of or stimulating proliferation of or stimulating disporte cells, for stimulating proliferation of or gene expression in pericyte cells, for stimulating proliferation of or gene expression and principle of stimulating the proliferation of or gene expression of antibody and arthritis. PRO polypeptides which stimulate the release of treating various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of and conditions which may benefit from enhanced local immune system cell infiltration. This sequence are also useful for treating sequence are also useful for treating sequence represents a human and conditions which may benefit from enhanced local immune system cell infiltration. invention relates to isolated human PRO polypeptides (secreted and New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO1114 PRO4978, useful in molecular biology, chromosome and gene mapping, generating antisense RNA and DNA, and in gene therapy. Claim 2; Fig 375; 638pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          transmembrane) polypeptides (I). (I) is useful for stimulating the release of TNF-alpha from human blood, for modulating the uptake of glucose or FRA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation of differentiation of chondrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of near utricular supporting cells, for stimulating the release of proteoglycans from cartilage, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the release of a cytokine from PBMC cells, for inhibiting the binding of A-peptide to factor VIIA, for inhibiting the differentiation of adipocyte cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour. The oligonucleotide probes

ò
are useful for isolating genomic and cDNA nuclectide sequences or antisense probes. (I) is also useful as therapeutic agent. PRO is useful in assays to identify other proteins or molecules involved in binding interaction. A polymucleotide (II) encoding (I) is useful in chromosome and gene mapping, in generation of antisense RNA and DNA, in the preparation of PRO polypeptide, for generating transgenic animals or knockout animals which in turn are useful in the development and screening of therapeutically useful reagents, in gene therapy, for chromosome identification, as chromosome marker, and for generating probes. An anti-(I)-antibody is useful in diagnostic assays for PRO, e.g. detecting its expression in specific cells, issues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. (I) and (II) are useful for tissue typing. This sequence encodes a novel human secreted and transmembrane PRO polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180

New secreted and transmembrane PRO nucleic acids and polypeptides, usefi for detecting a tumor, stimulating the release of tumor necrosis factor alpha and stimulating the proliferation of endothelial cells.

2; Fig 375; 637pp; English Claim

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis (actor-alpha (TNF-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adremal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, in generating to polymucleotides are useful in molecular biology, in generating a this man in gene therapy. The polymucleotides may also antisense RNA and bnA and in gene therapy. The polymucleotides may also consider in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening or knock-out animals which are useful in the development and screening or knock-out animals which are useful as tumours, for stimulating of indifferation of or gene expression in responsive to the polypeptides or for gene expression in pericyte cells, for stimulating of proliferation of inner ear utricular supporting of the proliferation of inner ear utricular such as sports injuries and articular cartilage are useful for treating various mammals or articular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides are useful for treating various mammals and condition. The sequence represents a human PRO polymucleotide of the invention. Note: the sequence represents a human PRO polymucleotide of the invention of the

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for atimulating the release of tumour necrosis factor-alpha (TRP-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidhey, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are generating either transgenic animals or knock-out animals witch are cegents. The PRO polypeptides or antibodies are used in preparing a medicament for treating acreening of therapeutically useful regents. The PRO polypeptides or antibodies are used in preparing a medicament for treating acreening of therapeutically useful regents. The PRO polypeptides or antibodies are used in preparing a medicament for treating acreening of therapeutically useful regents. The PRO polypeptides or antibodies are used in preparing of a primate calls, for stimulating the uptake of glucose or PRA by skeeteal muscle cells, for stimulating the uptake of crimulating differentian of or gene expression in pericyte cells, for stimulating cells or cally for inducing endothelial cells, for stimulating cells or cally consideration of angeograe cells, for stimulating acreasing endothelial cells or administer and returning cells or cartilage are useful for treating sports-related joint problems, arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, of arthritis prometrial and managed and properties are also useful for treating sports-related joint properties are also useful for treating various mammaland
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180

3 Gao

New PRO nucleic acid, useful for manufacturing a medicament for diagnosing or treating tumor.

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the problemation of chondrocyte cells and a method for colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The bused in preparing PRO polypeptides by recombinant techniques and antisense RNA and bNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or antibodies are used in preparing cells, for attimulating proliferation of stimulating and inhibiting proliferation of constraints of alpocyte cells, for stimulating the proliferation of inner are utricular supporting cells or stimulating proliferation of inner are utricular supporting cells or treating various bone and/or cartilage alsorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating various thalassaemias mammalian haemoglobin-associated disorders such as various thalassaemias

CC The invention describes an isolated RPO (secreted and transmembrane)

CC polypeptide (1). PRO929, PRO120, PRO1139 polypeptide are useful for stimulating the proliferation of or gene expression in the control of control of chondrocyte cells. PRO357, PRO125, PRO130, or PRO4405 polypeptide are useful for stimulating the proliferation or differentiation of chondrocyte cells. PRO231, PRO925, PRO135, PRO1306 or PRO1419 polypeptide are useful for stimulating the release of tumour necrosis factor (TNF).

CC cells. PRO231, PRO925, PRO351, PRO1305, PRO1419, PRO1419, PRO1416, PRO1414, PRO1410, PRO1411, PRO1

or in New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO1114 PRO4978, useful in molecular biology, chromosome and gene mapping, generating antisense RNA and DNA, and in gene therapy.

English Claim 2; Fig 375; 637pp; The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for proliferation or dates. From human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The prolymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating prolymucleotides may also antisense RNA and DNA and in gene therapy. The polymucleotides may also conserved in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and sorrening of knock-out animals which are useful in the development and sorrening or knock-out animals which are useful in the development and sorrening or knock-out animals which are useful an intended to antibodies, such as tumours, for stimulating and inhibiting proliferation of mantipodies, such as tumours, for stimulating and inhibiting proliferation of such mantipodies, such as tumours, for stimulating differentiation of adipocyte cells, for inducing endothelial cell tube formation and for stimulating various bone and/or cartilage disorders such as various themmalian haemoglobin-associated disorders such as various themmalian haemoglobin-associated disorders such as various that infiltration. New secreted and transmembrane PRO nucleic acids and polypeptides, useful for detecting a tumor, stimulating the proliferation or differentiation of chondrocyte cells and stimulating the release of tumor necrosis factor Deforge L, Desnoyers L, Filvaroff E, G A, Godowski PJ, Gurney AL, Sherwood S; Tumas D, Watanabe CK, Wood WI, Zhang Z; Baker KP, Beresini M, Gerritsen ME, Goddard Gerritsen ME, Goddard Smith V, Stewart TA, WPI; 2003-852594/79. P-PSDB; ADD11068.

Claim 2; SEQ ID NO 375; 637pp; English. alpha.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymuclectides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the

```
proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polynucleotides are useful in molecular biology, including uses as antisense RNA and in gene therapy. The polynucleotides may also centisense RNA and DNA and in gene therapy. The polynucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or medicament for treating a condition responsive to the polypeptides or of medicament for treating a condition responsive to the polypeptides or of mibodies, such as tumours, for stimulating and inhibiting proliferation of of man microvascular endothelial cells, for modulating the uptake of glucose or FRA by skeletal muscle cells, for adipocyte cells, for stimulating cells or poliferation of inner ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating cells or articular and/or cartilage defects, osteoarthritis such as sports injuries and certifiate are also useful for treating sports-related joint problems. Contributed and organization of inner expense or properties which stimulate the release of proceoglycan cartilage defects, osteoarthritis such as mammalian haemoglobin-contributed disorders such as various thalassaemias and conditions which associated disorders such as various thalassaemias and conditions. The sequence data for this patent is also available in electronic format certifier measurements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     360

The invention relates to an isolated nucleic acid, a polypeptide and transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded by the nucleic acid, or an agonist or antagonist, is used to treat a cardiovascular, endothelial, or angiogenic disorder in a mammal, preferably a human. The human may have suffered a myocardial infarction or has cardiac hypertrophy, trauma, a cancer, or age-related macular degeneration. The cardiac hypertrophy is characterised by the presence of an elavated level of BFR-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial cell growth in a mammal. PRO21 or an agonist is used to induce cardiac hypertrophy. PRO1376 or PRO1449 is used to inhibit end angiogenesis. PRO4302 or an agonist is used to induce endothelial cell apoptosis. A PRO polypeptide, given in the specification, or an agonist is used to cardiac eliminate or inhibit smooth muscle cell growth, or to induce endothelial cell tube formation. The present sequence represents a cDNA encoding a PRO polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid encoding a secreted and transmembrane polypeptide for treating a cardiovascular, endothelial, or angiogenic disorder in a mammal, such as cancer or age-related macular degeneration.

WPI; 2003-844454/78. P-PSDB; ADC47949 New secreted and transmembrane PRO polypeptides and nucleic acids useful for detecting a tumor, stimulating the release of proteoglycans from cartilage and stimulating the proliferation of endothelial cells.

Claim 2, Fig 375, 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for opposition to proserate, rectal, kidney, cervical and liver tumours). The prolymucleotides are useful in molecular biology, including uses a hybridisation probes, in chromosome and gene mapping, in generating chybridisation probes, inch on gene therapy. The polymucleotides may also a hybridisation proparing PRO polypeptides by recombinant techniques and in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful extensions at tumours, for stimulating the upparing a condition responsive to the polypeptides or antibodies are used in preparing of human microvascular endothelial cells, for modulating the uptake of stimulating differantiation of stimulating and inhibiting proliferation of stells or gene expression in pericyte cells, for stimulating configuration of organ expression in pericyte cells, for stimulating are useful for treating such as sports injuries and arthritis. PRO polypeptides which stimulates and conditions which cartinage defects, osteoarthritis and rheumatoid arthritis. PRO colypeptides are useful for treating various mammalian hemoglobin-associated disorders such as various thalassamias and condition. The sequence represents a human PRO polymucleotide of the invention. Note: from uspro expresents a human PRO polymucleotide of the invention. Note: from USPTO at sequence represents a human PRO polymucleotide of the invention.

WPI; 2003-657980/62. P-PSDB; ADC77827 One hundred and twenty two nucleic acids encoding PRO polypeptides, useful in gene therapy, or for preparing a medicament for treating a condition that is responsive to the PRO polypeptide or anti-PRO antibody, e.g. cancer

Claim 2; Fig 125; 314pp; English

The invention describes an isolated PRO (secreted and transmembrane) polygeptide (1). PRO982, PRO1160, PRO1187 or PRO1329 polygeptide are useful for stimulating the pro116c, PRO1187 or PRO1329 polygeptide are useful pericyte cells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are useful for stimulating the pro11feration or differentiation of chondrocyte cells. PRO31, PRO357, PRO725, PRO1155, PRO136 or PRO1419 polypeptide are useful for stimulating the release of tumour necrosis factor (TNF)-

Claim 2; Fig 375; 637pp; English.

diagnosing or treating tumor.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation of differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polynucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polynucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The FRO polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular endothelial cells, for modulating the uptake of

glucose or FFA (free fatty acid) by skeletal muscle cells or adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating proliferation of or gene expression in perioryce cells, for trimulating the proliferation of inner ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid carthritis. PRO polypeptides are also useful for treating various mammalian haemoglobin-associated disorders such as various thalasseemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polymucleotide of the invention. Note: The sequence date for this patent is also available in electronic format from USPTO at seqdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           420

The invention relates to an isolated mucleic acid, a polypeptide and transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded the nucleic acid, a polypeptide encoded by the nucleic acid, or an agonist or antagonist, is used to treat a cardiovascular, endothelial, or angiogenic disorder in a mammal, or preferably a human. The human may have suffered a myocardial infarction or has cardiach hypertrophy, trauma, a cancer, or age-related macular can elevated level of PGF-2 alpha. A PRO polypeptide, given in the an elevated level of PGF-2 alpha. A PRO polypeptide, given in the cancilaction, or an agonist is used to inhibit or stimulate endothelial call growth in a mammal. PRO21 or an agonist is used to induce cardiac hypertrophy. PRO1376 or PRO1449 is used to stimulate angiogenesis. PRO3190 or an agonist is used to induce cardiac hypertrophy. PRO1376 or polypeptide, given in the specification, or an agonist is used to polypeptide, given in the specification, or an agonist is used to call into the profice of the invention or an agonist is used to continue or inhibit smooth muscle cell growth, or to induce endothelial call into formation. The present sequence represents a cDNA encoding a proportion or an agonist is used to produce the invention or an about a continue or an agonist is used to be call the formation. The present sequence represents a cDNA encoding a produce and the produce and New isolated nucleic acid encoding a secreted and transmembrane polypeptide, useful for treating a cardiovascular, endothelial, or angiogenic disorder in a mammal, such as cancer or age-related macular degeneration. cardiovascular disorder; endothelial disorder; angiogenic disorder; myocardial infarction; cardiac hypertrophy; trauma; cancer; ges-related macular degeneration; angiogenesis; endothelial cell apoptosis; smooth muscle cell growth; endothelial cell tube formation. New secreted and transmembrane PRO nucleic acids and polypeptides, useful for detecting a tumor, stimulating the release of tumor necrosis factor alpha from blood and stimulating the release of proteoglycans from cartilage

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNP-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, olynucleotides are useful in molecular biology, including uses as in chromosome and gene mapping, in generating of the transganic animals of the polymucleotides may also bybridisation probes, in chromosome and gene mapping, in generating of the transganic animals of the polymucleotides may also be useful in the development and screening of therapeutically useful responsive the polymucleotides may also be useful in the development and screening of therapeutically useful responsive the polymorating are transganic animals of therapeutically useful responsive to the polymptides or antibodies are useful in the development and screening of therapeutically useful responsive to the polymptides of antibodies, such as tumours, for stimulating and inhibiting proliferation of antibodies are useful for treating cells, for stimulating the uptake of stimulating differentiation of adpocyte cells, for stimulating cells for stimulating cells for stimulating cells for stimulating cells, for inducing endothelial cells, for modulating cells, for stimulating cells, for inducing endothelial cells of cells, for stimulating cells, for inducing endothelial cells, for stimulating cells, for from USPTO at segdata.uspto.gov/sequence.html.

```
The invention describes an isolated PRO (secreted and transmembrane)

polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are
useful for stimulating the proliferation of or gene expression in
periovte cells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are useful
for stimulating the proliferation or differentiation of chondrocyte
cells. PRO357, PRO355, PRO1185, PRO1186 or PRO449 polypeptide
cells. PRO317, PRO357, PRO1255, PRO1186 or PRO449 polypeptide
are useful for stimulating the release of tumour necrosis factor (TNF)-
alpha from human blood. PRO982, PRO357, PRO125, PRO1419, PRO1419,
PRO147, PRO3137, PRO526, PRO3163, PRO899, PRO111, PRO1411, PRO1410,

involves comparing the level of expression of the above PRO polypeptides in a test sample of cells taken from the mammal, and a control sample of normal cells of the same cell type, where a higher level of expression of the properties in the test sample as compared to the control sample is indicative of the presence of tumour in the mammal. The tumour is lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polynucleotide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgents animals or knock-out animals which are useful screening useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This sequence encodes a human secreted and transmembrane.

i g New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO1114 PRO4978, useful in molecular biology, chromosome and gene mapping, generating antisense RNA and DNA, and in gene therapy.

Claim 2; SEQ ID NO 375; 637pp; English.

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (1). (1) is useful for stimulating the creases of TMF-alpha from human blood, for modulating the uptake of glucose or FPA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating proliferation of endothelial cells, for stimulating cells, for inhibiting the differentiation of adipocyte cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, cells, for stimulating proliferation of endothelial cells, for detecting the state of the presence of tumour in a mammal. The tumour is lung, colon, breast, cells, cervical or liver tumour. The oligomodecetic probes are useful for isolating genomic and CDNA mucleotide sequences or antisense probes. (1) is also useful as therapeutic agent. PRO is useful in agene mapping, in generation of antisense RNA and DNA, in the corporation, A polympucleotide (II) encoding (I) is useful in chromosome corporation of PRO polypeptide, for generating transgenic animals or chromosome marker, and for generating chromosome detecting its expression in specific cells, itssues or serum, and for chromosome affinity purification of RNO from recombinant cell culture or natural sources. (I) and (III) are useful in diagnostic assays for PRO, eganowel human secreted and transmembrane PRO polypeptide.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymuclectides encoding them. The invention also relates to an antibody which specifically binds to a FRO polypeptide, a method for stimulating the invention also relates to an antibody which specifically binds to a FRO polypeptide, a method for stimulating the presence of a tumour in a memmal (e.g. adrenal, lung, colon, breast, prostate, rettal, kidney, cervical and liver tumours). The polymuclectides are useful in molecular biology, including uses a hybridisation probes, in chromosome and gene mapping, in generating a stringense RNA and DNA and in gene therapy. The polymuclectides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapputically useful useful in the development and screening of therapputically useful useful in the development and screening of therapputically useful captures or PRO polypeptides or antibodies are used in preparing a medicament for traating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of thus proliferation of adoptoryte cells, for stimulating differentiation of adoptoryte cells, for stimulating various bene and/or cartilage disorders such as sports injunities and cartilage are useful for treating sports-related joint problems, carticular antional and sports as apported in arthritis. PRO polypeptides which stimulate the release of proteoglycan associated disorders such as various thalassembas and conditions which may benefit from enhanced local immune system cell infiltration. This sequence encodes a human PRO Polypeptide of the invention. Note: The sequence and and sequence and local immune system cell infiltration. This sequence the response of the properior o New isolated, secreted and transmembrane PRO polypeptides and nucleic acids, useful for detection of tumors, modulating the uptake of glucose or free fatty acids and stimulating the release of proteoglycans from cartilage. 3 Gao Baker KP, Beresini M, Deforge L, Desnoyers L, Filvaroff E, G. Claim 2; Fig 375; 638pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blod, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for opporting the presence of a tumour in a mammal (e.g. adrenal, lung, proliferation probes, in chromosome and gone mapping, in generating colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in chromosome and gone mapping, in generating thy prisesses and in preparing PRO polypeptides by recombinant techniques and in cartisense RNA and broken and some herapy. The polymucleotides may also consisted in preparing PRO polypeptides by recombinant techniques and in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development of screening of knock-out animals which are useful in the development of screening of colonial calls, for modilating the upsake of multipodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular andothalal cells, for modilating the uptake of grounders or PRA by skeletal muscle cells, for modilating the uptake of stimulating differantiation of adipocyte cells, for stimulating colligration of inner ar utricular such as sports injuries and arthritis. PRO polypeptides which stimulate the relates of profeception of inner ar utricular such as sports injuries and articular cartilage defects, osteoarthitis and rheumatoid arthritis. PRO polypeptides which stimulassaemias and conditions which casociated disorders such as various home and/or cartilage defects, osteoarthitis and rheumatoid arthritis. The proliferation of such as various and cartilage are useful for treating various mammalian haemoglobin may benefit fro

in assays to identify other proteins or molecules involved in binding interaction. A polynucleotide (II) encoding (I) is useful in chromosome and game mapping, in generation of antisense RNA and DNA, in the preparation of FRO polypeptide, for generating transgenic animals or knockout animals which in turn are useful in the development and carcening of therapeutically useful reagents, in gene therapy, for chromosome identification, as chromosome marker, and for generating probes. An anti-(I)-antibody is useful in diagnostic assays for FRO, e.g. detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. (I) and (II) are useful for tissue typing. This sequence encodes a novel human secreted and transmembrane PRO polypeptide. ö 300 480 540 540 600 9 999 720 720 780 840 120 180 180 240 240 300 360 360 420 420 480 600 780 60 60 GGTTGGCTTTGTGAGTGAAGACGAATACTTGGAATTTCAGGGCATCACCCGGGAGCAGTC 1 GTTGTGTCCTTCAGCAAAACAGTGGATTTAAATCTCCCTTGCACAAGCTTGAGAACAC 121 AAGAAAAAATCATGGAAAACCATCCAGCCAAAAATGCACAATTCTATCTCTTGGGCAAT 181 CTTCACGGGCTGGCTGCTCTGTGTCTTTCCAAGGAGTGCCCGTGCGCGAGAGGAGTGC CACCTTCCCCAAAGCTATGGACAACGTGACGGCAGGGGGAGGGGCGCCACCCTCAG 241 CACCTTCCCCAPAGCTATGGACAACGTGACGGTCCGGCAGGGGGAGAGCGCCACCTCAG 301 GIGCACIAITGACAACCGGGICACCCGGGIGGCCTGGCTAAACCGCAGCACCATCCTCTA 361 HGCTGGGAATGACAAGTGGTGGCTGGATCCTGGGTGGTCCTTCTGAGCAACACCCAAAC GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATATGACGAGGGCCCTTACACCTGCTC CAAAATTGTAGAGATTTCTTCAGATATCTCCATTAATGAAGGGAACAATATTAGCCTCAC CAAAATTGTAGAGATTTCTTCAGATATCTCCATTAATGAAGGGAACAATATTAGCCTCAC CIGCATAGCAACTGGTAGAGCCTACGGTTACTTGGAGACACATCTCTCCCAAAGC CTGCATAGCAACTGGTAGACCCAGAGCCTACGGTTACTTGGAGACACATTGCTCTCCCCAAAGC GGTTGGCTTTGTGAGTGAAGACGAATACTTGGAAATTCAGGGCATCACCCGGGAGCAGTC AGGGGACTACGAGTGCGTCCCAATGACGTGGCCGCCCCCGTGGTACGGAGAGTAAA GGTCACCGTGAACTATCCACCATACATTTCAGAAGCCAAGGGTACAGGTGTCCCCGTGGG GITGIGTCCTICAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC AAGAAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTTGGGCAAT CTTCACGGGGCTGCCTGTCTCTCTTCCAAGGAGTGCCCGGTGCGCAGCGGAGATGC GIGCACTATTGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCCTA TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCCAAAC GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGACGAGGGCCCTTACACCTGCTC GGTGCAGACAGACCACCCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC Gaps .; Query Match 100.0%; Score 1679; DB 1; Length 1679; Best Local Similarity 100.0%; Pred. (first entry) 15-JAN-2004 Human secreted/transmembrane PRO polypeptide cDNA #28

ss; gene; human; secreted protein; transmembrane protein; carditovascular disorder; endochellald disorder; anglogenic disorder; myocardial infarction; cardiac hypertrophy; trauma; cancer; age-related macular degeneration; anglogenesis;

The invention relates to an isolated nucleic acid encoding a secreted and transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded cation or an agonist or antagonist, is used to treat a cardiovascular, endothelial, or angiogenic disorder in a mammal, preferably a human. The human may have suffered a myocardial infarction or has cardiac hypertrophy, trauma, a cancer, or age-related macular degeneration. The cardiac hypertrophy is characterised by the presence of an elevated level of PGP-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial call prowth in a mammal. PRO21 or an agonist is used to induce cardiac hypertrophy. PRO1376 or PRO4491 is used to stimulate angiogenesis. PRO4102 or an agonist is used to induce endothelial call apoptosis, A PRO polypeptide, given in the specification, or an agonist is used to stimulate or inhibit smooth muscle cell growth, or to induce endothelial call tube formation. The present sequence represents a cDNA encoding a New isolated nucleic acids encoding a secreted and transmembrane polypeptide for treating a cardiovascular, endothelial, or angiogenic disorder in a mammal, such as cancer or age-related macular degeneration. cc factor-alpha (TRF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal | e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as nit chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polymucleotides may also antisense RNA and DNA and in gene therapy. The polymucleotides may also consider the proparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful cuseful in the development and screening of therapeutically useful continued to the polypeptides or antibodies, such as tumours, for simulating and inhibiting proliferation of antibodies, such as tumours, for simulating and inhibiting the uptake of continuating differentiation of adipocyte cells, for simulating differentiation of adipocyte cells, for simulating of proliferation of or gene expression in pericyte cells, for simulating continuer cartilage are useful for treating sports injuries and andors artifaced disorders such as sports injuries and conditions which stimulate the release of proteoglycans from cartilage defects, osteoarthritis and rheumatoid arthritis. PRO colypeptides are useful for treating various mammalian haemoglobin-associated disorders such as various thalassemias and conditions which may benefit from enhanced local immune system cell infiltration. The genence date for this patent is also available in electronic format from the USPTO website at sequence last over the proposition. 8888888888888888888888888888888888

New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO1114 PRO4978, useful in molecular biology, chromosome and gene mapping, generating antisense RNA and DNA, and in gene therapy. WPI; 2003-875638/81. P-PSDB; ADD02577.

3 Gao

Claim 2; Fig 375; 637pp; English

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for offerenting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in concarting either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a metibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular endothelial cells, for modulating the uptake of

glucose or FFA by skeletal muscle cells or adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating proliferation of or gene expression in periotte cells, for stimulating the proliferation of or gene expression in periotte cells, for stimulating the proliferation of inner ear unicular supporting cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating cells or trading cells or triving to arthitis. PRO polypeptides which stimulate the release of proteglycans tributis. PRO polypeptides which stimulate the release of proteglycans from cartilage are useful for treating sports-related joint problems, arthritis, ostopathyritis and rheumatoid arthritis. PRO polypeptides are also useful for treating various mammalian haemoglobing associated disorders such as various thalassaemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polynucleotide of the invention. Note: The sequence data for this patent is also available in electronic format from USPTO at segdata.uspto.gov/sequence.html. ö 480 540 600 900 999 999 720 480 720 780 780 180 180 240 240 300 300 360 360 420 420 120 120 9 9 GGTGCAGACAGCAACCAAGAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC CAAAATTGTAGAGATTTCTTCAGATATCTCCATTAATGAAGGGAACAATATTAGCCTCAC crecarageaacregragaceaageeracegragearracragagacacarereceaage egrinescririciteacidadeaceariacrirecaaarireacecerteacececececaere AGGGGACTACGAGTGCCTCCAATGACGTGGCCGCGCCCGTGGTACGGAGAGTAAA GCAGTACAGCATCGAGATCCAGAACGTGGGATGTGTATATGACGAGGGCCCTTACACCTGCTC CTGCATAGCAACTGGTAGACCAGAGCCTACGGTTACTTGGAGACACATCTCCCCAAAGC 1 GITGIGICCTICAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC GTIGIGICCTICAGCAAAACAGIGGATTTAAATCTCCTIGCACAAGCTTGAGAGCAACAC AATCTATCAGGAAAGAAAGAAAAAAAAACGGAACCTGACAAAAAAAGAAGAAAAAGAAG 121 AAGAAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTCTTGGGCAAT CIICACGGGGCTGGCTGCTCTGTGTCTCTTCCAAGGAGTGCCCGTGCGCAGGGGATGC CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGGAGAGCGCCACCTCAG Grecactarreacaacceegreacceegreeccreecrascraaaccecaecaccarcerea TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCAAAC TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCCAAAC GGTGCAGACAGCCAACCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC <u>AATCTATCAGGAAAGAAAGAAAAAAAAACGGAACCTGACAAAAAAAGAAGAAAAAGAAG</u> <u> AAGAAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTCTTGGGCAAT</u> CTTCACGGGGCTGCTGTGTGTCTCTTCCAAGGAGTGCCCGTGCGCAGCGGAGATGC GTGCACTATTGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCCTCTA GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGACGAGGGCCCTTACACCTGCTC Gaps ; 0 Sequence 1679 BP; 498 A; 432 C; 419 G; 330 T; 0 U; 0 Other; Indels 100.0%; Score 1679; DB 1; 100.0%; Pred. 2003-765528/72. WPI; 2003-765528/ P-PSDB; ADD50517. Novel isolated PRO polypeptide useful for tissue typing, as molecular weight markers in protein electrophoresis, for treating arthritis, tumor

Claim 2; Fig 125; 308pp; English.

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polymucleotides encoding them.

Cr transmembrane polypeptides) and the PRO polymucleotides encoding them. Cr the PRO polypeptides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumour, rectal tumour or liver tumour, breast tumour, con profester tumour, rectal tumour or liver tumour) in amammal, for stimulating the release of tumour necrosis factor (TNF) alpha from human cr stimulating the proliferation of or gene chordrocyte cells, for estimulating the proliferation of or gene condition in perioyte cells or for stimulating the proliferation of or gene corression in periosy in creamonsome and gene mapping, in generating canisation in probes, in chromosome and gene mapping, in generating transgenic animals which creamens RNA and DNA, in preparing PRO polypeptides by recombinant contisense RNA and DNA, in preparing PRO polypeptides by recombinant contisense RNA and DNA, in preparing a medicament for treating contises, are useful for preparing a medicament for treating contistion which is responsive to the PRO polypeptides, or anti-PRO antibodies, are useful for preparing a medicament for treating and indisorders (e.g. arthritis, sports injuries), involving inducing the recombinant contistion which is responsive to the PRO polypeptides or anti-PRO antibodies, such as perioyte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the recombinant contistion of chondrocytes. The PRO polypeptides are useful as condition which is responsive to the PRO polypeptides are useful as condition of chondrocytes. The PRO polypeptides are useful as condification as human PRO polypeptides are useful.

PR01114 New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO1114 PRO4978, useful in molecular biology, chromosome and gene mapping, generating antisense RNA and DNA, and in gene therapy.

Fig 375; 637pp; English

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the invention also relates for stimulating the polymuchania for stimulating the presence of a tumuman blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for proliferation probes, in chromosome and gene mapping, including uses a stimulating properties are useful in molecular biology, including uses and in gene therapy. The polymucleotides may also the used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are medicament for treating a condition responsive to the polypeptides or medicament for treating a condition responsive to the polypeptides or medicament for treating a condition responsive to the polypeptides or medicament for treating a condition responsive to the polypeptides or medicament for treating a condition responsive to the polypeptides or medicament for treating a condition responsive to the polypeptides or medicament for treating a condition responsive to the polypeptides or medicament for treating and inhibiting proliferation of stimulating and inhibiting proliferation of stimulating and inhibiting and inhibiting proliferation of stimulating and inhibiting and inhibiting colliferation of stimulating and inhibiting and inhibiting avaious bone and/or cartilage disorders such as sports injurates and various bone and/or cartilage disorders such as sports injuration of appropriate such as the proliferation of and prover cells, for stimulating and contributed and contribute and conditions which as sported injured and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polyperides of the invention. This sequence represents a human PRO polyperide of the invention o from USPTO at segdata.uspto.gov/sequence.html.

(I) is useful for stimulating the release of TNF-alpha from human blood, for modulating the uptake of glucose or FRA by skeletal muscle cells or adjocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of proteoglycans from cartilage, for stimulating the proliferation of T-lymbocyte cells, for stimulating the proliferation of T-lymbocyte cells, for stimulating the proliferation of T-lymbocyte cells, for stimulating the release of a cytokine from PBMC cells, for inhibiting the binding of A-peptide to factor VIIA, for inhibiting the differentiation of adipocyte cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour. The oligonucleotide probes

are useful for isolating genomic and cDNA nucleotide sequences or antisense probes. (I) is also useful as therapeutic agent. PRO is useful in assays to identify other proteins or molecules involved in binding interaction. A polymucleotide (II) encoding (I) is useful in chromosome and gene mapping, in generation of antisense RNA and DNA, in the preparation of PRO polypeptide, for generating transgenic animals or knockout animals which in turn are useful in the development and screening of therapeutically useful reagents, in gene therapy, for chromosome marker, and for generating probes. An anti-(I)-antibody is useful in diagnostic assays for PRO, e.g. detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. (I) and (II) are useful for tissue typing. This sequence encodes a novel human secreted and transmembrane PRO polypeptide. 480 540 900 900 99 999 120 120 180 180 240 240 300 300 360 420 420 480 720 9 9 GGTTGGCTTTGTGAGAAGACGAATACTTGGAAATTCAGGGCATCACCCGGGAGCAGTC 1 GITGTGTCCTTCAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC 61 AATCTATCAGGAAAGAAAGAAAAAAAAACCGAACCTGACAAAAAAAGAAAAAGAAG AAGAAAAAAATCITGGGCAACCITCCAGCCAAAAATGCACAATTCTATCTCTTGGGCAAT 121 AAGAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTCTTGGGCAAT 181 CTTCACGGGCTGGCTGCTCTGTGTCTCTTCCAAGAGTGCCCGTGCGCAGCGGAATGC 241 CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGGAGAGCGCCACCTCAG 361 IGCIGGGAAIGACAAGIGGIGCCIGGAICCTCGCGIGGICCTICIGAGCAACACCCCAAAC GGTGCAGACAGACAACCAACAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC 481 GGTGCAGACAGACAACCACCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC CAAAATTGTAGAGATTTCTTCAGATATCTCCATTAATGAAGGGAACAATATTAGCCTCAC CAAAATTGTAGAGATTTCTTCAGATATCTCCCATTAATGAAGGGAACAATATTAGCCTCAC CTGCATAGCAACTGGTAGACCAGAGCCTACGGTTACTTGGAGACACATCTCCCCAAAGC CTGCATAGCAACTGGTAGACCAGAGCCTACGGTTACTTGGAGACACATCTCCCCAAAGC GGTTGGCTTTGTGAGTGAAGACGAATACTTGGAAATTCAGGGCATCACCCGGGAGCAGTC AGGGGACTACGAGTGCCTCCAATGACGTGGCCGCGCCCGTGGTACGGAGAGTAAA 1 GITGIGICCTICAGCAAAACAGIGGATTIAAAICTCCTIGCACAAGCTIGAGAGCAACAC 181 CTTCACGGGCTGCTGCTCTCTTTCCAAGGAGTGCCCGTGCGCAGCGGAATGC 241 CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGAGAGCGCCCACCCTCAG 301 GIGCACIATIGACAACCGGGICACCCGGGIGGCCIGGCIAAACCGCAGCACCATCCTCIA 361 TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCCAAAC GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGACGAGGCCCTTACACCTGCTC ; 0 Query Match

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polypuclectides encoding them.

The PRO polypeptides and polymuclectides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, cortain the transmembrane tumour, rectal tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TMF) alpha from human constraints the release of tumour necrosis factor (TMF) alpha from human to stimulating the proliferation of or gene conditions in perioyte cells for stimulating the proliferation of or gene captession in perioyte cells or for stimulating the proliferation of or gene captession in perioyte cells or for stimulating the proliferation of or gene captes in chromosome and gene mapping, in generating transgenic animals which the development and screening of therapeutically useful reagents, in gene therapy, in chromosome identification, as chromosome contition which is responsive to the PRO polypeptides, or anti-PRO antibodies, are useful for preparing a medicament for treating or condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as perioyte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the redifferentiation of chondrocytes. The PRO polypeptides are useful as condition at human PRO polypeptides are useful as medical markers and in tissue typing. This condition is represented electrophoresis, and in tissue typing. The invention describes an isolated PRO (secreted and transmembrane)

CC polypeptide (I) PRO982, PRO1160, PRO1139 polypeptide are useful for stimulating the proliferation of of one expression in periods. PRO127, PRO129, PRO129, Or PRO4159 polypeptide are useful for stimulating the proliferation of affectatian of chondrocyte cells. PRO357, PRO759, PRO1155, PRO1306 or PRO419 polypeptide are useful for stimulating the release of tumour necrosis factor (INP)- alpha from human blood. PRO982, PRO157, PRO1306, PRO1419, PRO1419, PRO131, PRO1337, PRO526, PRO181, PRO1337, PRO136, PRO1319, PR 5 $x \neq 0$

WPI; 2003-900159/82. P-PSDB; ADD92510.

Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis.

Claim 2; SEQ ID NO 375; 636pp; English

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis a factor-alpha (TNF-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adream), timug, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The proliferation probes, in chromosome and gene mapping, in generating an insense RNA and BNA and in Gene therapy. The polymucleotides may also hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and BNA and in gene therapy. The polymucleotides may also persenting either transgenic animals or knock-out animals which are useful in the development and screening of therapoutically which are useful in the development and screening of therapoutically useful creagents. The PRO polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of such an uncorascular endothelial cells, for modulating the uptake of glucose or FFA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation of or gene expression in periore cells, for stimulating the proliferation of adipocyte cells, for stimulating the proliferation of anothelial cell the formation and for treating various bone and/or cartilage disorders such as sports injuries and articular cartilage are useful for treating sports-related joint problems, articular cartilage are useful for treating sports-related joint problems, articular cartilage are useful for treating sports-related joint problems, articular cartilage are useful for treating sports-related joint problems, articular cartilage are useful for treating sports-related joint problems, arguence represents a human PRO polypeptides or 1 inhuman endormation. Note: from USPTO at sequence r

                                                                                                                                                                                                                                  08-NOV-2000
                                                                                                                                                                                             22-MAY-2000
                                                                                                                                                                                                                                                                                                            18-MAY-2001
                                                                                                                                                                                                                                                                  28-FEB-200
```

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TMF-alpha) from human blood, a method for stimulating the prosidering the presence of a tumour in a mammal (e.g. adrenal, lung, completed for stimulating of condrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polyuncleotides are useful in molecular biology, including uses as hybridasation probes, in chromosome and gene mapping, in generating cartisenses RNA and BNA and in Gene therapy. The polyuncleotides may also the used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of the properties, such as tumours, for stimulating of inperpating a condition responsive to the polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of municovascular endothelial cells, for modulating the uptake of stimulating differentiation of anglocyte cells, for stimulating differation of inner ear utricular supporting cells, for stimulating differation of inner ear utricular supporting cells, for stimulating cells or tells, for stimulating are useful for treating sports injuries and articular cartilage are useful for treating various mammalian hasmoglobin-associated disorders such as various thalassaemias and condition. Note:

Colls, form cartilage are useful for treating various mammalian hasmoglobin-associated disorders such as various thalassaemias and conditions of sequence represente a human PRO polymograed of the inv Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis. 120 180 240 Gao W; 1 GTTGTGTCCTTCAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC 121 AAGAAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTCTTGGGCAAT 1 GITGTGTCCTTCAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGGAGCAACAC Gaps Deforge L, Desnoyers L, Filvaroff E, Ga A, Godowski PJ, Gurney AL, Sherwood S; Tumas D, Watanabe CK, Wood WI, Zhang Z; ; 0 Query Match

```
The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, certor-alpha (TNF-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, certorial and liver tumours). The prolynucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and BNA and in gene therapy. The polynucleotides may also a present in the development and screening of kerzapurical properties or antibodies are used in preparing a condition of kerzapurically which are useful in the development and screening of kerzapurically which are useful in the development and screening of therapurically properties or antibodies are used in preparing a medicament for traating a condition responsive to the polypeptides or antibodies are used in preparing a medicament for traating a condition responsive to the polypeptides or antibodies are used in preparing of furose or FRA by skeletal muscle cells, for modulating the uptake of glucose or FRA by skeletal muscle cells, for scimulating the proliferation of or gene expression in periorte cells, for stimulating differentiation of adipocyte cells, for stimulating afferentiation of adipocyte cells, for modulating the proliferation of or gene expression in periorte cells, for stimulating the proliferation of or gene expression in periorte cells, for stimulating and cells or trunducing endothelial cell the release of proteoglycans (from cartilage are useful for treating sports injuries and articular cartilage are useful for treating sports-related joint problems, articular cartilage are useful for treating sports-related joint problems, arti
                                                                                                                                                                                                                                                                                                                                                                                                                                  Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gao W;

cartilage disorders, e.g. arthritis,

SEQ ID NO 375; 636pp; English Claim 2;

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (I). (I) is useful for stimulating the creases of TRY-alpha from human blood, for modulating the uptake of glucose or FFA by skeletal muscle calls or adipocyte cells, for stimulating the proliferation of orgene expression in pericyte cells, for stimulating the proliferation of orgene expression in pericyte cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating proliferation of endothelial cells, for stimulating cells, for inhibiting the binding of the presence of tumour in a mammal. The tumour is lung, colon, breast, certificate, rectal, cervical or liver tumour is lung, colon, breast, cervical or proceins or molecules involved in binding incraraction. A polymuclectie (II) and colon, breagent and colon and transmendrane PRO polypeptide. Cells, cel

(GETH) GENENTECH INC.

Baker KP, Beresini M, Deforge L, Desnoyers L, Filvaroff E, Gao W; Gerritsen ME, Goddard A, Godowski PJ, Gurney AL, Sherwood S; Smith V, Stewart TA, Tumas D, Watanabe CK, Wood WI, Zhang Z;

WPI; 2003-900166/82. P-PSDB; ADE22249. Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone

cartilage disorders, e.g. arthritis.

Claim 2; Fig 375; 638pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the identification or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for proliferation presence of a tumour in a mammal (e.g. adremal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The prolynucleotides are useful in molecular biology, in generating a conjunctentide and sense therapy. The polynucleotides may also a strictors with a development and screenbind of theraputically useful and relations probability of polypeptides by recombinant techniques and in the development and screenbing of theraputically useful as the proliferation of a tumours, for stimulating which are a medicanent for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of minimal macrovascular andothalal cells, for modilating the uptake of stimulating differantiation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating cells or Tulymphocyte cells, for inducing endothelial cell tube formation and for treating articular cartilage are useful for treating various memalian nemoglabine.

Colls, form cartilage are useful for treating various memalian hemoglabined are also useful for treating various memalian and conditions which may benefit from enhanced local immune system cell infiltration. This sequence encodes a human PRO polypeptide of the invention of the inventor of the invention of the inventor of the inventor of the useful for treating various enventor. The usequence data for this patent is also vestive the inventor. The first

ceagents. The PRO polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular endothelial cells, for modulating proliferation of subman ensole cells, for modulating the uptake of glucose or PRA by skeletal muscle cells, for modulating the uptake of stimulating differentiation of adjocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of inner ear utricular supporting cells or -1 Jmphocyte cells, for inducing endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and rathritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, articular cartilage are useful for treating various mammalian haemoglobinassociated disorders such as various thalassaemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence encodes a human PRO polypeptide of the invention. Note: The sequence data for this parent is also available in electronic format from the USPTO website at sequence cooks.
                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240

ADE35610

RESULT 93 ADE35610 ID ADE3X XX AC ADE3X

```
The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% andno acid sequence identity contransmembrane protein) having at least 80% andno acid sequence detected signal in the specification (including PRO lacking its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising at PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule comprising the vector and producing sequence, and a natti-PRO polypeptide is useful for detecting a PRO4993 polypeptide is useful for linking a polypeptide is useful for detecting pRO375, PRO700 or PRO739 polypeptide is useful for detecting pRO755, PRO700 or PRO739 polypeptide is useful for inking a bloactive molecule to a cell expressing PRO357 polypeptide; and PRO4993 polypeptide; molecule complete to a cell expressing PRO4993 polypeptide or anti-PRO4993 polypeptide is useful for modulating the collypeptide or anti-PRO4993 polypeptide is useful for modulating the suspensing PRO559 polypeptide; RRO700 or PRO739 polypeptide or anti-PRO4993 polypept
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ashkenazi AJ, Baker KP, Botstein D, Desnoyers L, Eaton DL; Ferrara N, Filvaroff E, Fong S, Gao W, Gerber H, Gerritsen ME; Goddard A, Godowski PJ, Grimaldi JC, Gurney AL, Hillan KJ; Kljavin IJ, Kwo SS, Napier N, Wood MI, Paoni NF, Roy MA, Shelton DL; Stewart TA, Tumas D, Williams PM, Wood WI;
                                                                                            Human, 85, gene, secreted protein; transmembrane protein, PRO; cytostatic; ophthalmological; antiarthritic; osteopathic; antirheumatic; vulnerary; auditory; tumour growth; retinal disorder; souditory; tumour growth; retinal disorder; sports-related joint problem; articular cartilage defects; osteoarthritis; rheumatoid arthritis; wound healing; hearing loss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New genes, and its encoded secreted and transmembrane polypeptides, useful for treating e.g. lung or breast tumors, osteoarthritis, rheumatoid arthritis, obesity, diabetes, hyperinsulinemia, hypoinsulinemia or wounds.
                                               Human cDNA encoding secreted/transmembrane protein, PRO337

PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO725, PRO700 or PRO739 polypeptide. The polypeptides are useful for inhibiting tumour growth, retinal disorders, sports-related joint poblems, artirital ar cartilage defects, osteoarthritis or rheumatoid arthritis, wound healing and hearing loss immammals. The present sequence encodes a PRO protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CTTCACGGGGCTGGCTCTGTGTCTTTCCAAGGAGTGCCCGTGCGCAGCGGAATGC

Claim 2; SEQ ID NO 522; 452pp; English

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal comprising a PRO secrited signal peptide, a PRO extracellular domain with or without its associated signal comprising a PRO secrited conjugation to respect the secretary of the secrit of

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO stracellular domain with or without its associated signal peptide, a PRO stracellular domain with or without its associated signal peptide, a PRO stracellular domain with or without its associated signal peptide, a PRO stracellular domain with or without its associated signal peptide, a PRO stracellular domain with or chimacric cell comprising the vector and producing PRO, a chimacric malcule comprising the vector and producing PRO, a host cell comprising the vector and producing PRO, a chimacric match of a heterologous amino acid sequence, and an anti-PRO polypeptide in a sample suspected of containing PRO, 939 polypeptide is useful for detecting PRO, in polypeptide. PRO, 25, PRO, 25, PRO, 25, PRO, 26, PRO,

Claim 2; Fig 375; 637pp; English

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymuclectides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNR-alpha) from human blood, a method for stimulating the proliferation of atumour in a mammal (e.g. darchal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as an included in preparing PRO polypeptides by recombinant techniques and in genetating proliferation of generating either transgenic animals or knock-out animals which are cuseful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing of the proliferation of alphocyte cells, for modulating the uptake of glucose or FRA by skelatal muscle cells, for modulating the uptake of stimulating differentiation of alphocyte cells, for stimulating cells of the stimulating cells of antibodies are useful for treating sports cells, for stimulating cells of the polypeptides or attributes and cartilage disorders such as sports injuries and cartilage are useful for treating sports-related joint problems, various bome and/or cartilage disorders such as sports injuries and arthuits. PRO polypeptides which stimulate the release of proteoglycans cells, for medicals cartilage are useful for treating sports-related joint problems, arthuits. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, arthuits are also useful for treating sports-related joint problems, are also useful for treating various mammalian hamoed local immune system cells in electronic format f from USPTO at segdata.uspto.gov/sequence.html.

NO 375; 637pp; English G .. 73 The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and inver tumours). The prolymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping in generating at this ense neparating problematics of polymucleotides are useful in molecular biology, including uses and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful cuseful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of thuman microvascular endothelial cells, for modulating the uptake of glucose or FRA by skeletal muscle cells or for stimulating differentiation of adipocyte cells, for stimulating various bone and/or cartilage disorders such as sports injunities and continue cells, for cartilage are useful for treating sports-related joint problems, architis, PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, architis, PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related disorders such as various thalassemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polymucleotide of the invention. This remains the patent is also available in electronic format from the patent is also available. from USPTO at segdata.uspto.gov/sequence.html.

bone Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various and/or cartilage disorders, e.g. arthritis.

Claim 2; SEQ ID NO 375; 636pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the prostation of differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adremal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polynucleotides are useful in molecular biology, including uses as colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polynucleotides are useful in molecular biology, including uses and in a preparing PRO polypeptides by recombinant techniques and in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful enter transgenic animals or knock-out animals which are useful enter transgenic animals or knock-out animals which are unimodates, such as tumours, for atimulating and inhibiting proliferation of human microvascular endothelial cells, for modulating the uptake of glucose or FRA by Releast muscle cells, for modulating the uptake of the proliferation of or gene expression in pericyte cells, for stimulating differantiation of adipocyte cells, for stimulating colls or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating creating entherities. PRO pypeptides which stimulates and conditions which carticular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO pylpeptides which stimulasseemias and condition. Geoguence represents a human PRO polymoclocities of the invention. Note: the sequence represents a human prolymoclocities of the invention. The requence data for this pacent i

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (I). (I) is useful for stimulating the release of TNF-alpha from human blood, for modulating the uptake of glucose or FPA by skelteral muscle cells or adipocyte cells, for stimulating the proliferation or differentiation of chondrocyte cells,

calls, for stimulating the release of proteoglycans from cartilage, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the braining of the release of a cytokine from FBMC cells, for inhibiting the binding of A-peptide to factor VIIA, for inhibiting the differentiation of adipocyte cells, for stimulating proliferation of endothelial cells, for detecting the prosence of tumour in amamal. The tumour is lung, colon, breast, proseste, rectal, cervical or liver tumour. The oligomolectide probes are useful for isolating genomic and crown nucleotide sequences or antisense probes. (I) is also useful as therapeutic agent. PRO is useful in assays to identify other proteins or molecules involved in binding interaction. A polymucleotide (II) encoding (I) is useful in chromosome comparation of PRO polympeptide, for generating transgent animals or knockout animals which in turn are useful in the development and screening of therapeutically useful reagents, in gene therapy, for chromosome factification, as chromosome marker, and for generating probes. An anti-(I)-antibody is useful in diagnostic assays for PRO, egc detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. (I) and (II) are useful for tissue typing. This sequence encodes a novel human secreted and transmembrane PRO polypeptide. 120 480 540 540 600 120 180 180 240 240 300 300 360 360 420 420 480 9 09 1 GTTGTGTCCTTCAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC 181 CTTCACGGGGCTGGCTGTGTGTCTCTTCCAAGGAGTGCCCGTGCGCGCAGCGAGTGC 301 GIGCACTATIGACAACCGGGTCACCCGGGTGGCCTAAAACCGCAGCACCATCCTCTA CAAAATTGTAGAGATTTCTTCAGATATCTCCATTAATGAAGGGAACAATATTAGCCTCAC CAAAATTGTAGAGATTTCTTCAGATATCTCCCATTAATGAAGGAACAATATTAGCCTCAC CTGCATAGCAACTGGTAGACCAGAGCCTACGGTTACTTGGAGACACATCTCTCCCAAAGC CTGCATAGCAACTGGTAGACCAGAGCCTACGGTTACTTGGAGACACATCTCTCCCCAAAGC GTTGTGTCCTTCAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC AAGAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTTGGGCAAT 121 AAGAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTTTGGGCAAT CTTCACGGGGCTGGCTCTCTGTGTCTCTTCCAAGGAGTGCCCGTGCGCAGCGGAATGC 241 caccificccaaagciarggacaacgigacgiccgcaagggagagaggcaccicag GIGCACIATIGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCCTCA TECTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCAAAAC GCAGTACAGCATCGAGAACGTGGATGTGTATGACGAGGGCCCTTACACCTGCTC 421 GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGACGAGGGCCCTTACACCTGCTC GGTGCAGACAGACAACCAACCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC for stimulating the proliferation of or gene expression in pericyte .; 0 Query Match 100.0%; Score 1679; DB 1; Length 1679; Best Local Similarity 100.0%; Pred. The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (1). (1) is useful for stimulating the release of TNF-alpha from human blood, for modulating the uptake of glucose or FRA by skeletal muscle calls or adipocyte cells, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the release of proteoglycans from cartilage, for

the stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the binding of A-peptide to factor VIA. for inhibiting the differentiation of adipocyte cells, for stimulating of A-peptide to factor VIA. for inhibiting the differentiation of adipocyte cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour. The oligonucleoside probes are useful for isolating genomic and cDNA mucleotide sequences or antiesnse probes. (I) is also useful as therapeutic agent. FRO is useful in assays to identify other proteins or molecules involved in binding interaction. A polymucleotide (I) is encoding (I) is useful in chromosome interaction of PRO polypeptide, for generating transgenic animals or knockout animals which in turn are useful in the development and screening of therapeutically useful reagents, in gene therapy, for knockout animals which in turn are useful in diagnostic assays for PRO, e.g. detecting its expression in specific cells, tissues or serum, and for detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. (I) and (II) are useful in cell culture or natural sources. (I) and ill are useful in the development or natural sources. (I) and the useful for tissue typing. This sequence encodes a novel human secreted and transmembrane PRO polypeptide. 480 180 180 240 240 360 360 420 420 480 540 9 CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGGAGAGCGCCACCCTCAG 300 300 60 301 GTGCACTAITGACAACCGGGTCACCGGGTGGCCTGGCTAAACCGCAGCACCATCCTCTA Genecadacaacaaccaaccaaagaccrcraggerccaccrcarrerecaagrarcrc 1 GITGIGICCTICAGCAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC GTTGTGCCTTCAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGGGAACAC AAGAAAAAAATCTTTGGGCAAAATGCACAATTCTATCTCTTGGGCAAT 121 AAGAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTCTTGGGCAAT CTTCACGGGGCTGGCTGTGTGTCTCTTCCAAGGAGTGCCCGTGCGCAGCGGGAATGC 241 CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGGAGAGCGCCACCCTCAG GTGCACTATTGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCCTTA TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCCAAAC TGCTGGGAATGACAAGTGGCTGGATCCTCGGGTGGTCTTCTGAGCAACACCCAAAC GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGACGAGGGCCCTTACACCTGCTC GGTGCAGACAGCCACCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC CTTCACGGGGCTGCTCTCTCTCTCTCCAAGGAGTGCCCGTGCGCAGCGGAGATGC Gaps ; 0 Query Match

New PRO nucleic acid, useful for manufacturing a medicament for diagnosing or treating tumor, for chromosome mapping or for tissue

Claim 2; Fig 375; 638pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TWF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung,

colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polynucleotides are useful in molecular biology, including uses as conversioned probes, in chromosome and gene mapping, in generating antiseation probes, in chromosome and gene mapping, in generating antiseation probes, in chromosome and gene mapping, in generating antiseation probes, animals or knock-out animals which are useful in the development and screening of therapeutically useful caseful in the development and screening of therapeutically useful caseful in the development and screening of therapeutically useful antibodies, such as tumours, for stimulating and inhibiting proliferation contribodies, such as tumours, for stimulating and inhibiting proliferation of antibodies or antibodies are used in preparing a contribudies or file feature of stimulating differentiation of adipocyte cells, for stimulating the uptake of stimulating differentiation of adipocyte cells, for stimulating contribudies or for gene expression in pericyte cells, for stimulating contribudies are useful for gene formation and for treating calls, for inducing endothelial cell tube formation and for treating carthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arbitritis. PRO plypeptides such as various thalassaemias and conditions which associated disorders such as various thalassaemias and conditions which sequence encodes a human PRO polypeptide of the invention. Note: The sequence data for this patent is also available in electronic format from the USPTO website at sequance insepto.gov. \$

3 Gao Baker KP, Beresini M, Deforge L, Desnoyers L, Filvaroff E, Ga Gerritsen ME, Goddard A, Godowski PJ, Gurney AL, Sherwood S; Smith V, Stewart TA, Tumas D, Watanabe CK, Wood WI, Zhang Z;

2003-899787/82. P-PSDB; ADD93062. Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis.

Claim 2; SEQ ID NO 375; 636pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymuclectides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polymucleotides may also antisense RNA and DNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in casents in either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful caseful in the development and screening of therapeutically useful caseful in the development and screening of therapeutically useful cantibodies, such as tumours, for stimulating and inhibiting proliferation of of human microvascular endothelial cells, for modulating the uptake of the broliferation of or gene expression in pericyte cells, for stimulating confliceration of inner ear utriculas or adapocyte cells, for stimulating confliceration of adapocyte cells, for stimulating and confliceration of adapocyte cells, for stimulating and confliceration of an articular supporting cells, for proliferation of an articular such as sports injuries and arthritis. PRO polypeptides which stimulate the release of proceediyans

from cartilage are useful for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides are also useful for treating various mammalian haemoglobin-associated disorders such as various thalassaemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polynucleotide of the invention. Note: The sequence data for this patent is also available in electronic format from USPIO at sequence.html.
                                                                                                                                                                                                                                                         120
                                                                                                                                                                                                                                                                                   120

comprising the vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule comprising C antibody. PRO33 polypeptide is useful for detecting a PR04993 polypeptide is useful for detecting PRO337 polypeptide is useful for detecting PRO335 polypeptide is useful for detecting PRO335 polypeptide is useful for detecting PRO335 polypeptide is useful for detecting a PR0155 polypeptide, and PR01559 polypeptide is useful for detecting DR0350 polypeptide is useful for detecting a PR0155 polypeptide is useful for linking a bioactive molecule to a cell expressing PR04993 polypeptide. The bioactive molecule causes death of the cell. PR0337 polypeptide; and PR01559 polypeptide; and PR01559 polypeptide is useful for linking a bioactive molecule to a cell expressing PR04993 polypeptide; and PR01559 polypeptide; and PR01559 polypeptide; and PR01559 polypeptide; and PR0159 polypeptide is useful for modulating the cell expressing PR04993 polypeptide; where the cell is killed. PR0337 polypeptide is useful for modulating the biological activity of the cell expressing PR01559 polypeptide; pr0499pptide; and PR01599 polypeptide or anti-PR04993 polypeptide; mactivity of the cell expressing PR01559 polypeptide. PR0700 or PR0799 polypeptide or anti-PR04993 polypeptide or anti-PR04993 polypeptide. PR0799 polypeptide or anti-PR04993 polypeptide or anti-PR04993 polypeptide. CC modulating the biological activity of the cell expressing PR0159 polypeptide or anti-PR04993 polypeptide. PR0799 polypeptide or anti-PR04999 polypeptide or anti-PR04999 polypeptide or anti-PR04999 polypeptide or anti-PR04999 polypeptide or undulating the biological activity of the cell expressing PR0799 polypeptide or anti-PR04999 polypeptide. CC PR0799 polypeptide or undulating the biological activity of the cell expressing PR079
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGAGAGCGCCACCTCAG
